Welcome to our sweet world! Do you already know all the types of our delicious chocolates? Explore the available flavors and choose your favorite addition.

Types of chocolates:

Milk – chosen by chefs around the world, distinguished by its exceptional creaminess. Thanks to her we have the impression that each piece of milk simply melts in our mouths!

Ruby – ruby sweetness with an intense, fruity flavor with a fresh, sour note. It is prepared with red originating cocoa beans from the Ivory Coast, Brazil and Ecuador.

Dark 56% or 72% coco – for many, it is a delightful compromise between sweet milk chocolate and dry, bitter. Depending on the content of cocoa, it will be perfect with various additives, creating completely original flavor compositions.

White – devoid of cocoa powder, characterized by a balanced taste with perceptible notes of milk, made for fans of original flavors. With additions, it also creates a delicious feast for the eyes!

NXT – 100% plant-based chocolate, free of allergens and even trace amounts of dairy. It is perfect and completely safe for vegans or people with lactose intolerance.

Honey – is a combination of pure, natural delicacies: traditionally produced milk chocolate with a touch of natural honey, which results in a creamy-caramel taste and creamy sweetness with a honey accent.

Caramel – a masterful composition of excellent ingredients, such as caramelized sugar and caramelized milk with an exciting pinch of salt. In its intense but balanced taste you will find rich notes of butter and cream.

Wholefruit – the latest type in our offer. Wholefruit chocolate is made entirely from pure cocoa fruit without vanilla, lecithin and refined sugar. The whole fruit is used for its production, which gives it its unique aroma. The healthiest and most organic chocolate you can imagine! This is its debut on the European advertising market.

Sugarfree – is a perfect flavor composition combining cocoa, milk and sweetness – but without added sugar. Its wonderfully harmonious taste and pleasant sweetness were obtained thanks to the use of maltitol, complemented by natural Bourbon vanilla. It's a refined composition that will be appreciated not only by every sweet lover in the traditional edition, but above all by people who avoid white sugar, keep in shape, and take care of the line and silhouette.

Additives and fillings for our top gourmet chocolates:

- ground almonds, pistachios, hazelnuts and walnuts,
- coffee from the oldest Polish roastery – Pluton,
- fruits and flowers,
- natural honey,
- salty caramel,
- roasted cocoa beans,
- salt and chili,
- spice cookies,

MOLDINGS

We are constantly working on the maximum reduction of plastic consumption in our packaging.

Where it is necessary due to the safety of a food product, we use one that is 80% recycled and 100% recyclable for reuse. Our product moldings are made of R-PET foil. What does it mean?

PET (polyethylene terephthalate) is currently one of the most commonly used packaging materials because it protects the product's properties as well as being lightweight, durable and transparent. Such packaging allows to maintain the high quality and properties of the stored product. PET packaging is made of the so-called primary raw material, i.e. obtained directly from crude oil fractions in an appropriate chemical process. One of the characteristics of PET is that it can be easily recycled, and because of the ease of processing and recovery, PET packaging

is a valuable raw material. They can be easily transformed into bottles, t-shirts, sleeping bags and carpets or other articles.

R-PET, or recycled PET, is a popular, high-quality plastic suitable for contact with food, commonly used for the production of bottles and packaging. Importantly, after processing, it does not lose the properties of PET. It is safe, functional and helps to significantly reduce the production of new plastics.

Why is the use of R-PET plastic beneficial for the natural environment?

- limits the production of new material,
- reduces CO₂ emissions from 40 to 80%,
- recycling reduces water consumption in the production process (approx. 90%) and energy (approx. 80%),
- R-PET is a step towards a closed circular economy,
- the material is suitable for continuous recovery - materials and raw materials can remain in economic circulation as long as possible R-PET has a lower carbon footprint.

The effect of using R-PET packaging is also a significant reduction in greenhouse gas emissions!

COMPOSTABLE FOILS

Due to the strict rules regarding the safety of food products, foil is an indispensable material that we use at SLODKIE. To minimize the consumption of plastic, we were the first on the Polish market of advertising products to introduce a 100% compostable foil. In addition, we also offer our sweets in packaging in which we have reduced the use of foil by as much as 65%. How is this possible?

The specialized packaging foils we use, provide strong ecological support for the growing consumer demand for more environmentally friendly packaging. Most types of BIO foil are based in over 90% on renewable resources, i.e. wood pulp, and have certificates of compliance with European and American standards for packaging suitable for industrial composting. What besides wood pulp?

The foils offer a good barrier for gases, and the coatings can be customized to provide different degrees of barrier for moisture, depending on the needs of the packaged product.

The ideal end-use scenario for BIO foil? Industrial or home composting! Today you can order advertising sweets in BIO foil and make a good gesture not only for your palate, but also for our planet!

- wood pulp from which BIO foil is produced comes from FSC-certified sources,
- compostable in a home composter,
- complete security of your advertising product.

Use BIO foil when ordering advertising sweets and take care of the good of our planet with us!
